

PARAS GARG

Game Design Student | Aspiring Level Designer

Punjab, India | M: +91-9854500096 | Email: gargparas2005@gmail.com | [LinkedIn: Paras Garg](#) | [Portfolio](#)

SUMMARY

Game Design student with hands-on experience in digital and physical game design, Unity based prototyping and game jams. Strong understanding of gameplay systems, mechanics and player behaviour. Experienced in identifying design and functionality issues through structured testing and clear documentation. Comfortable working with technical concepts, with strong foundation in coding languages and gameplay scripting.

PROJECTS

- **Game Jam Project (Before Nightfall):** Worked as a team-lead in a 24-hour competition, researched about the theme, designed the level layouts focusing on player flow, pacing and risk-reward adjustment. Conducted iterative playtesting and collaborated closely with the team under strict time constraints to identify gameplay issues. Contributed to storyline for the game, overall design document and final polish. Placed among Top 10.
 - **Physical Board Game (The Last Resistance):** Designed a strategy-based board game, inspired by historical events. Did a full, detailed research about related history and every single concept. Defined many new, original ideas and mechanics, involving core loop, rules, progression, etc. Displayed rare design tactics, using different idea generation tools and refining the core to a final, polished product.
 - **Physical Game Design (SwitchBall):** Developed an original, physical game focused on role-switching mechanics and player decision-making, balanced scoring and gameplay flow through multiple test iterations. Presented clearly through video and viva presentation, demonstrating strong understanding of rule-clarity, edge cases and fairness.
 - **GMTK Game Jam 2025 Project (Atemporal):** Researched and contributed to core idea generation, gameplay and level layouts for a 2D time-manipulation puzzle platformer. Balanced the game mechanics to revolve around the theme, linking player movement to time flow, creating risk-reward decision making and emergent puzzle dynamics. Developed level structures across multiple thematic environments.
-

SKILLS

Game Design: Idea generation tools, Identifying core mechanics and loops, Game design documentation, Level design, Risk vs reward balancing.

Game Testing & Analysis: Functional gameplay testing, bug identification, edge-cases and system behaviour analysis, Clear issue documentation.

Tools & Tech: C/C++, Python, MySQL, Unity (basic scripting, triggers), Photoshop (2D assets), Blender (3D modelling).

Soft Skills: Professional communication, Attention to minor details, Team collaboration, Ability to work under deadlines, Constant feedback and application, Leadership qualities and experience to manage a team.

EDUCATION

High School (Non-Med)

GNF Public School, Patiala (2021-2023)

B.Tech (CSE, Game Design specialization)

Chitkara University, Rajpura (2023-2027)
